

ASTRA LA 2901

Silicone leveling agent

Description

ASTRA LA 2901 is an organomodified polysiloxane solution. The additive imparts excellent hammertone effect to water-based coating systems. A fine hammer pattern effect can be achieved at a very low dosage: the smaller the dosage, the thinner the pattern and vice versa - the higher the dosage, the thicker the pattern.

Physical and Chemical properties

Ingredient: Organomodified polysiloxane

Appearance: Colorless transparent liquid

Active part: 25%

Solvent: Dipropylene glycol monomethyl ether

Application System and Dosage

ASTRA LA 2901 is suitable for water-borne coating systems.

Usually, it is possible to introduce the additive at a random stage of the manufacture with 0.1% to 3% dosage upon total formulation.

Package

25kg metal pail.
